OBJECTIVE

AI/ML Engineering aspirant with hands-on experience building end-to-end machine learning, deep learning, and Generative AI applications (RAG systems, computer vision, full-stack ML web apps). Seeking an AI/ML Engineer role to apply skills in Python, TensorFlow, LLMs, and production-grade deployment.

EDUCATION

Lovely Professional University

Master of Computer Applications (MCA) — Currently in 4th Semester (Ongoing)

Chandigarh, India

PGGCG-42 (Post Graduate Government College for Girls)

Bachelor of Computer Applications (BCA)

Chandigarh, India

EXPERIENCE

AI/ML Intern — Excellence Technology

Jan 2026 – Present

- Undergoing an intensive hands-on AI/ML training-based internship covering the complete ML/DL/GenAI workflow, from data preprocessing and model building to deployment.
- Applied learnings to design and build production-style projects, including a RAG-based enterprise assistant, a full-stack healthcare prediction system, and a bug severity prediction application.
- Gained practical exposure to model optimization, API development, authentication, and cloud/free-tier deployment strategies.

PROJECTS

Enterprise Knowledge Copilot | RAG-based AI Assistant

Python, FAISS, Sentence Transformers, Google Gemini API (gemini-2.5-flash), Gradio, Google Colab

- Built a Retrieval-Augmented Generation (RAG) system enabling natural language querying over enterprise documents, combining semantic search with LLM-based response generation.
- Implemented a document embedding pipeline using Sentence Transformers and FAISS for high-speed vector similarity search across large document collections.
- Integrated Google Gemini AI to generate context-aware, grounded responses via an interactive Gradio chat interface, architected for deployment on Hugging Face Spaces with secure API key management.

Smart Healthcare System | AI-Powered Full-Stack Web App

Python, Scikit-learn, FastAPI, Streamlit, SQLite, JWT

- Built a full-stack healthcare application predicting heart disease risk and fitness level using SVM/Random Forest pipelines with OneHotEncoding and StandardScaler preprocessing.
- Designed a FastAPI backend with JWT-based authentication (user & admin roles) and integrated a context-aware AI chatbot delivering personalized health advice.
- Developed an interactive Streamlit dashboard with real-time Matplotlib visualizations and automated PDF report generation (ReportLab) for prediction results.

Bug Severity Predictor | AI-Powered Full-Stack Web App

Python, FastAPI, Streamlit, Scikit-learn, PostgreSQL, JWT | Live: bug-severity-predictor-ucxb.onrender.com

- Built a full-stack ML application predicting software bug severity (Critical/High/Medium/Low) using an MLPClassifier trained on 31 bug-metadata features, achieving ~91% accuracy on held-out test data.
- Designed a FastAPI backend with JWT authentication, bcrypt password hashing, and role-based access control, connected to a cloud-hosted PostgreSQL (Supabase) database.
- Deployed end-to-end on Render (backend) and Streamlit Cloud (frontend); optimized the model from TensorFlow/Keras to Scikit-learn MLPClassifier to fit free-tier memory constraints.

SKILLS

Languages: Python, SQL

Machine Learning: Scikit-learn, SVM, Random Forest, MLPClassifier, Logistic Regression, Feature Engineering, Model Evaluation

Deep Learning: TensorFlow, Keras, CNN, MobileNetV2, Transfer Learning

Generative AI: LLMs, LangChain, Transformers, Sentence Transformers, RAG, FAISS, Google Gemini API

Backend & Web: FastAPI, JWT Authentication, REST APIs, Streamlit, Gradio

Databases: SQLite, PostgreSQL (Supabase)

Tools & Platforms: Git, GitHub, Google Colab, Hugging Face Spaces, Render, Streamlit Cloud, Postman, Swagger, MS Word, MS Excel, MS PowerPoint
